

DocToDoctor App User Guide

A visual guide.

Introduction

DocToDoctor is a secure application to manage your patients' clinical information.

DocToDoctor is a Global Protection System for Clinical Information on mobile devices.

The DocToDoctor App grants you privacy, security, legality, intimacy and communication the most secure way possible.

For further information you can visit our website www.doctodoctor.com and get to know more about the app and its benefits.

Download the App

The DocToDoctor App is ready for Apple users and Android users.

Search for the DocToDoctor App on the AppStore or Google Play. Note that the publisher is Molinapps.

In case you still haven't downloaded the App you can click on the linked buttons to go to the AppStore or PlayStore depending of your phone.

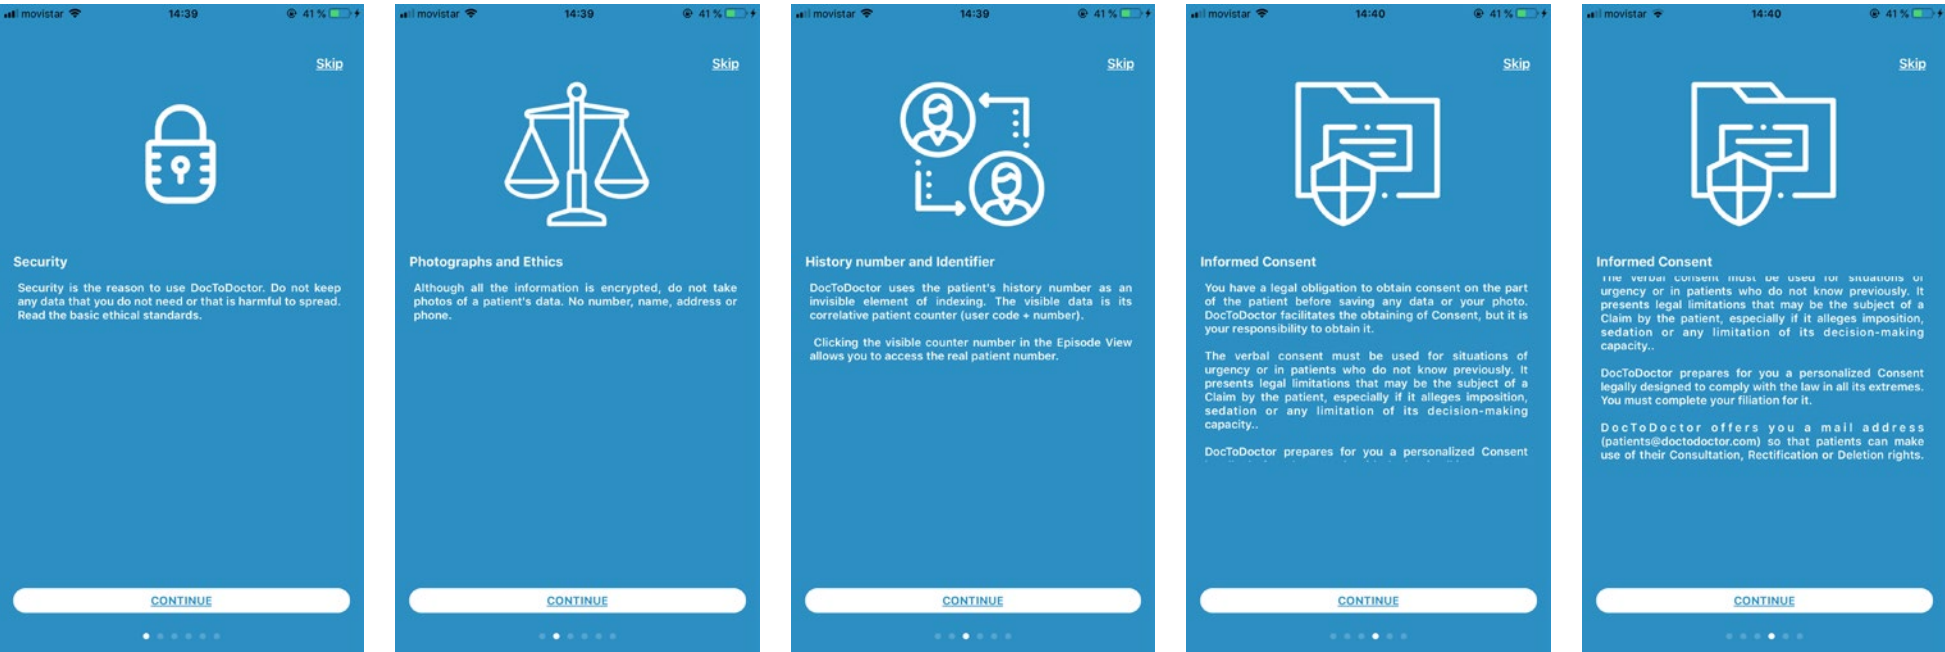

Now available to download on:

4. Episodes Main Management

Adding new episode

Insert a Medical ID# in the box. If not, it will assign an Unnamed00nn by default
You should add a Patient Consent, either verbal or capturing a written Consent.
You can skip this step if necessary.

4. Episodes Main Management

Verbal patient Consent

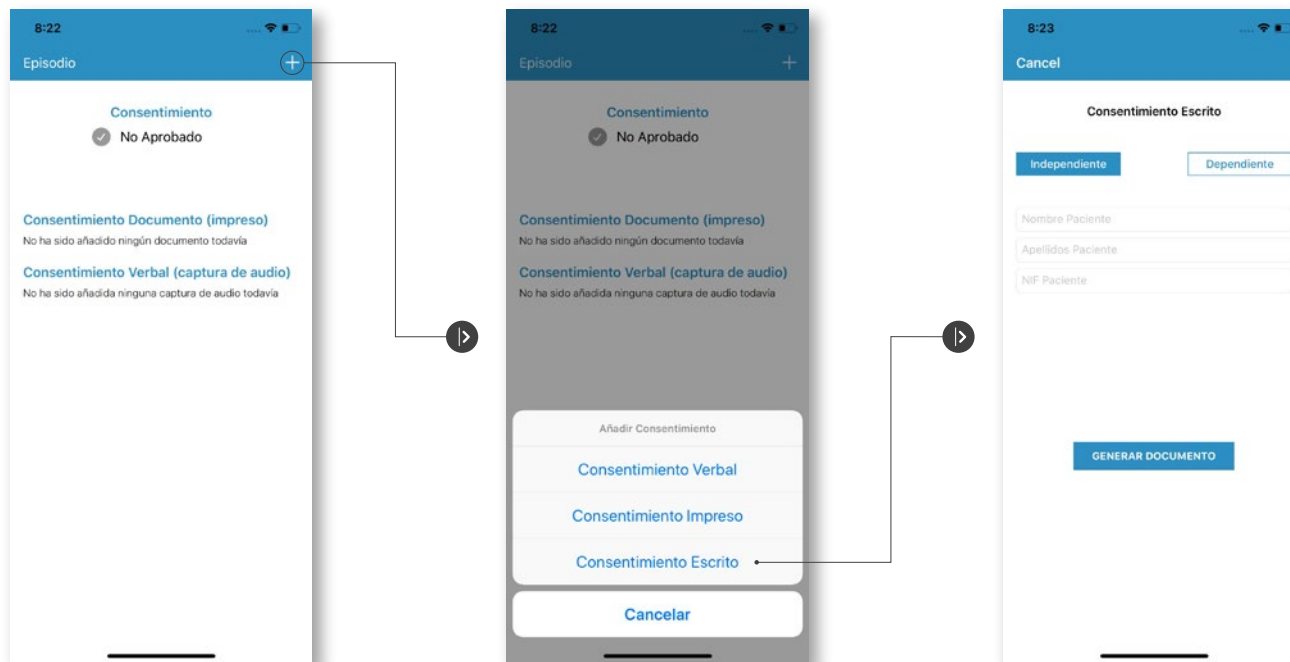

In Verbal Consent you have to choose if the patient is Autonomous or not.
The Professional text will show up, and you have to read it to the patient or relative.
You can record your dictation.

4. Episodes Main Management

Written patient Consent

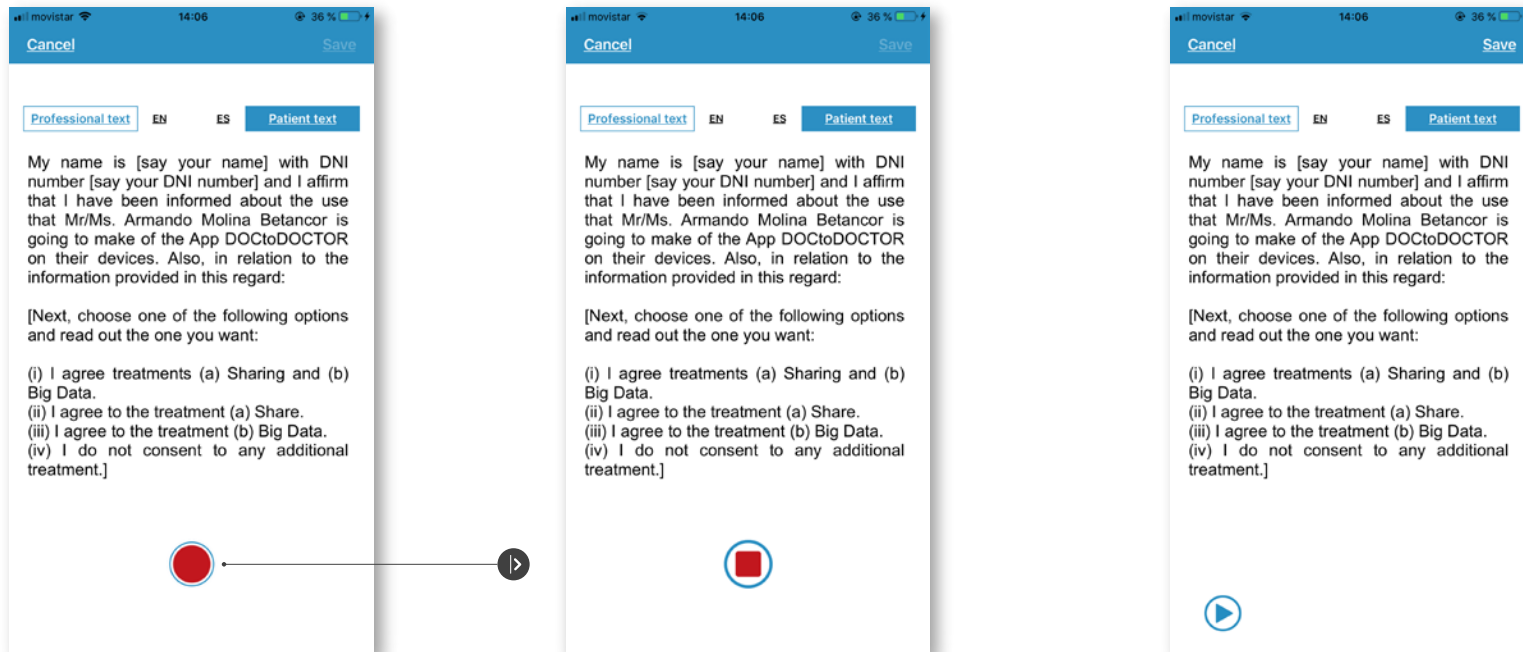

In Verbal Consent you have to choose if the patient is Autonomous or not. The Professional text will show up, and you have to read it to the patient or relative. You can record your dictation.

4. Episodes Main Management

Verbal patient Consent

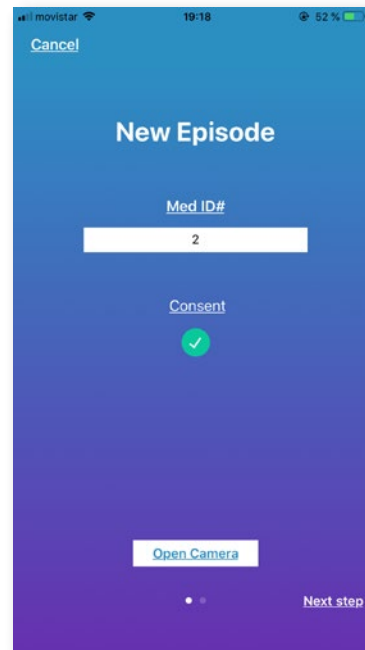

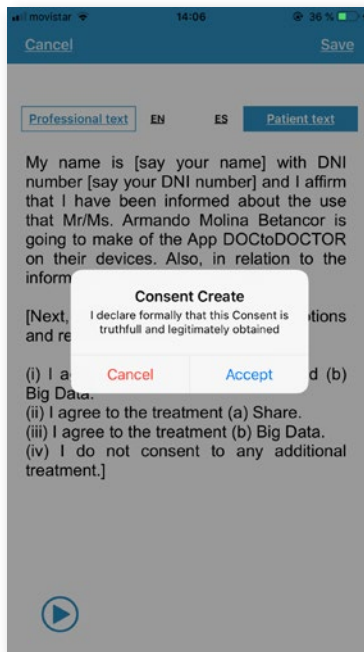

Invite the patient to read the Patient Text or to repeat your words reading it.
If not recording from previous screen, press de red button to start recording.
Tapping again finish the recording; the patient can listen to confirm his/her approval.
Press Save.

4. Episodes Main Management

Adding new episode and verbal patient consent

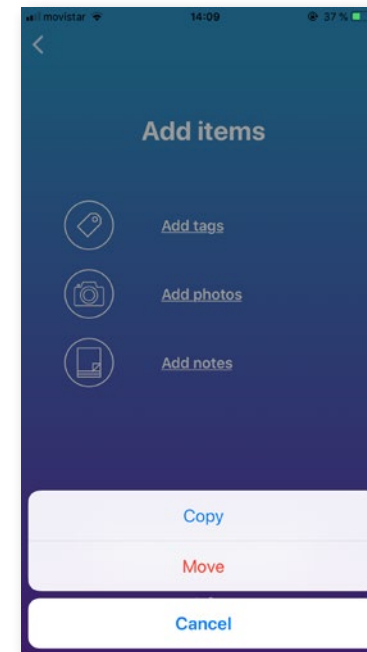

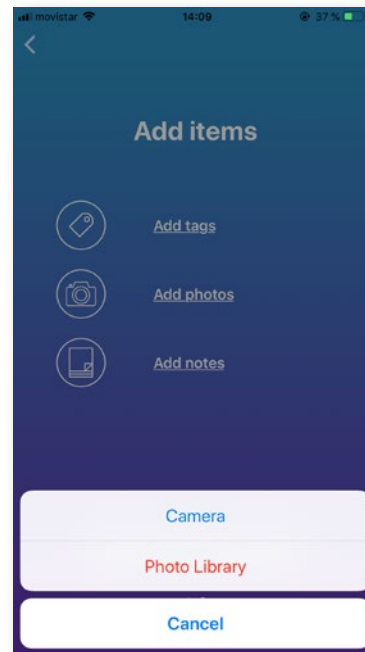

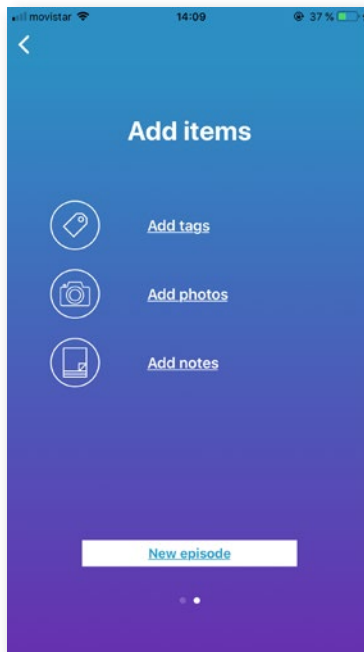

The user must validate the patient consent. With the patient consent approved you can either jump to the camera or choose Next Step.

4. Episodes Main Management

Adding Items to the episode

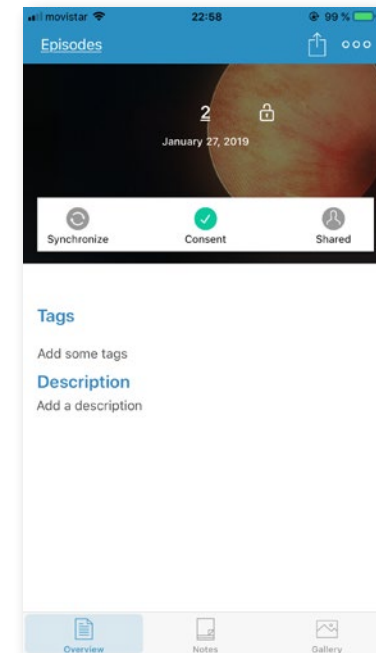

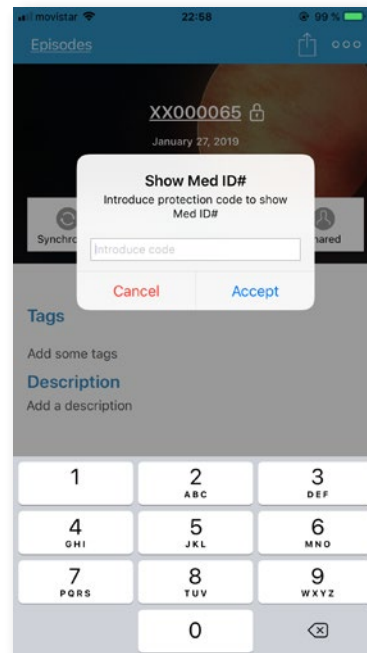

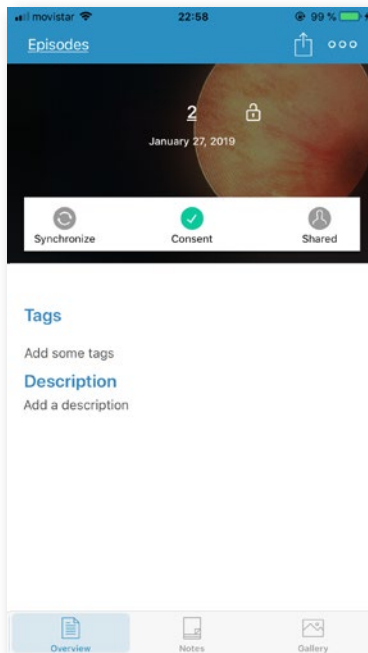

The episode can be cancelled anytime. If select Add Photos, you'll have the option between Importing for your device Library (moving, deleting or just copying into the app), or access directly the Camera.

5. Single Episode Management

Finding you the Patient ID#

The only way to know the original ID# of the patient is by tapping on the Pseudonymized name and entering your protection code. Please note that we have no access to the original ID#, only you in your device.
